

Lin Engineering Ltd.

Paul Lin, President

John and Fred Lin

Family meetings normally happen at the kitchen table, but not for the Lins. When this accomplished clan sits down for a discussion, they are in the offices of their family's engineering firm Lin Engineering, Ltd. Founded by Paul Lin in 1991,

the growing firm now boasts 35 employees including his wife, Helen, and sons John and Fred.

As Lin Engineering got up and running in the early 1990s, the firm landed its first contract with the Illinois Tollway to serve as a prime consultant for rehabilitation work along

the Tri-State Tollway (I-94/I-294/I-80). Today, the firm's focus has expanded to include structural, roadway and drainage design, as well as surveying services.

When the Tollway's *Move Illinois* Program came along, Lin Engineering was more than ready to participate. Its contracts to provide civil and structural design and survey assistance for the Elgin O'Hare Western Access and Jane Addams Memorial Tollway (I-90) projects have allowed the firm to hire three new staff members and possibly add two more full-time employees in the future.

"Our participation in the Illinois Tollway's *Move Illinois* Program has allowed us to maintain our current family of employees and add several new positions within our firm to meet the exciting challenges ahead."
